

Subject Name: Architectural Design VI		
Course Contents & Hourly break-up		
Module Number	Topics	Number of hours
Module 1	<i>Methods of space programming- learning through case studies, deriving the number of occupants/ users and formally arriving at unit space requirement. Learning of the use of codes and standards while space programming.</i>	27
Module 2	<i>Detailed study of methodology for design conception development, learning from case studies. Understanding the site context, climate, orientation. Knowing the site features, Site zoning, and connectivity to site from adjoining roads, topography, following of Bylaws for demarcation of project space and initiation of design.</i>	27
Module 3	<i>Short field study tour for similar contemporary buildings including site visit, if feasible.Planning considering Structural Systems using different materials like steel or concrete or composites for accommodating large spans and clear spaces, low ceilings heights.</i>	27
Module 4	<i>Functional connection and dependencies of different spaces within the same building or multiple buildings or building blocks. Understanding the horizontal and vertical network of spaces and buildings for providing smooth connectivity of users.</i>	18
Module 5	<i>Sustainability and Energy efficiency special emphasis on site planning and orientation of buildings as a passive measure, vehicular movement of goods, services and people and parking plan. Building services, HVAC systems, acoustical considerations in space design like auditorium or conference rooms and architectural detailing. Adaptable building envelop using parametric design for facades.</i>	9
<i>Design assignments include both individual buildings and sites including multiple buildings. Suggested types of design assignments: Convention Center, Airport, Multispecialty Hospital, Cultural complex, Sports complex, Stadium</i>
