

SYLLABUS :-

Expt. No. Titles of Experiments
1 Principles of metallographic sample preparation and observation.
2 Solidification of metals and alloys, and determination of phase diagrams.
3 Observation of macrostructures.
4 Work hardening and recrystallization annealing of metals and alloys.
5 Study of different types of eutectic microstructures.
6 Heat treatment of different plain carbon steels, and their microstructures and hardness.
7 Microstructures of some commercially available non-ferrous alloys.
8 Microstructures, compositions and hardness of different components used in a bicycle.
