

SYLLABUS :-

General introduction to ships types, Aspects of shipbuilding technology, Structural components - bottom construction, shell plating, decks, fore and aft peak construction, superstructure, bulkheads, Framing system, Midship sections, Structural continuity, Steel material preparation - shot blasting, acid pickling etc, Plate cutting methods- Waterjet cutting, Plasma cutting etc. .14. Fusion welding- Types of power sources and their characteristics, Welding parameters and their effect on welded joints, Welding methods - GMAW, SMAW, SAW, Friction-stir welding etc. Welding distortions-causes and prevention, Welding defects, Non-destructive testing. .10. Overview of ship production systems, Shipyard Layout, Information for shipbuilding, Product standardization and work simplification, Product work breakdown structure and integrated zone engineering, Network analysis, Scheduling and resource allocation. .18. Texts and References: .1. Ship Construction : D.J Eyres and G.J Bruce .Butterworth-Heinemann. .2. Ship Design and Construction : Taggart/ Lamb .SNAME..3. Ship Construction and Welding : N.R Mandal .Springer. .4. Ship Production .2nd Edition.: R L Storch, Colin P Hammon, Howard M Bunch and Richard C Moore
